UNITED STATES DEPARTMENT OF AGRICULTURE

AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

400 North Eighth Street

Richmond, Virginia 23240

The cover pictures depict the various commodities and programs supervised by the Agricultural Stabilization and Conservation Service in Virginia, as prescribed by the Federal Regulations. A brief summary of these programs and statistics concerning them for the crop year 1972, is set forth in this annual report.

FOREWORD

This report provides narrative and graphic data covering the farm program accomplishments of the Agricultural Stabilization and Conservation Service in the State of Virginia during 1972.

We hope this information will be useful to persons interested in the work being done by this agency of the United States Department of Agriculture.

Sincere appreciation is extended to county and community ASC committeemen, county office personnel, representatives of other agricultural agencies, farmers, and farm organizations who contributed to the success of farm programs in 1972.

SECTION I - ADMINISTRATION OF ASCS PROGRAMS

The Virginia State Agricultural Stabilization and Conservation (ASC) Committee in 1972 consisted of three farmer members: James S. Gillespie, Chairman, Delman R. Carr, Homer A. Long, Jr., and Dr. M. F. Ellmore, Director, Agriculture and Natural Resources, VPI and SU Extension Division. The three farmer members are appointed by the Secretary of Agriculture. The State ASC committee is responsible for the efficient and orderly operation of county and community ASC committees, county ASCS offices, and county employees within the State in accordance with applicable regulations and instructions. The committee also determines program and administrative policies as authorized by applicable regulations, instructions, and procedures. The execution of such policies is carried out by State and county employees under the direction of the State Executive Director.

The State Executive Director, Mahlon K. Rudy, is assisted in the administration of the ASCS programs in 94 counties and 5 cities by program specialists, the Administrative Division, and eight district directors who act as liaison between the State and county ASCS offices in their respective districts.

The county ASC committee, acting through community committeemen and other personnel, is responsible for carrying out ASCS programs in the county. The county ASC committee is composed of three elected farmer members, consisting of a chairman, vice chairman and regular member. The Extension Agent, Agriculture, also serves as an ex officio member of the county committee. Members are elected on a rotated basis with one member being elected each year for a three-year term. A county executive director is employed by the county committee, subject to standards and qualifications furnished by the State committee, to carry out the policies and decisions of the committee, to efficiently administer all operations performed by the county office, to hire qualified employees, to work closely with the district director, and to serve the public in a faithful impartial manner. Committeemen are elected each year by farmers who are of legal voting age and who have an interest in a farm as owner, tenant, or sharecropper, and who are participating or are eligible to participate in one or more of the programs administered by the ASCS. A person not of legal voting age may vote if he is in charge of the supervision and conduct of the farming operation on an entire farm.

Candidates for community committeemen are first selected by nominating petitions for persons eligible and willing to serve. A petition nominating a person as a candidate must be signed by three eligible voters in the community. In the event nominating petitions are received for less than six candidates, the incumbent community committee completes the slate of nominees. Also, when less than six candidates are nominated by petition in communities having at least eight percent minority members and petitions do not nominate at least one minority member, one is selected by the community committee when completing

the slate of persons to be placed on the ballot. The person with the highest number of votes in the election becomes chairman of the community committee, the person with the second highest becomes vice chairman, and the regular member is that person with the third highest number of votes.

The three members of each elected community committee assemble in a county convention for the purpose of electing one member of the county committee for a three-year term and a first and second alternate member. Other vacancies on the county committee that may have been caused by resignation or deaths during the previous year are also filled at the same time for the term that is vacant.

A community committee has the responsibility of helping the county committee keep farmers informed about ASCS programs, assists in the determination of farm allotments, aids in REAP sign-up, gives advice and suggestions as applicable to farmers in its community, and helps develop program recommendations for submission to the State committee.

The following tabulation shows the results of the election held on December 1, 1972. The mail ballot method was used in all counties.

COMMUNITY COMMITTEE ELECTIONS

County	No. of Eligible Voters	Number Voting	Percent Voting

COUNTY EXECUTIVE DIRECTOR TRAINEE PROGRAM

The county executive director trainee program was developed to insure that adequately-trained, knowledgeable personnel would be available to county committees when needed to fill county executive director positions. The State committee has authorized the position of "county executive director trainee" in order to provide a sufficient number of trained personnel for future vacancies.

Applicants must be citizens of the United States. They must be of good character, have a suitable background and possessed of good temperament and proper attitude. They must give evidence of management capability and the ability to work effectively with the public. Candidates must be college graduates. A farm background is not required if the degree is in agriculture.

Trainees are employed on regular appointment with a minimum training period of six months. Mileage and per diem are paid as well as other fringe benefits afforded county employees.

The trainee program has been designed for full use of principles involved in on-the-job training. Several counties of varying sizes and types of agriculture throughout the State have been designated as county training centers. The trainees are assigned various programs in each of six counties during the six month minimum training period. The training period may be extended should the need arise.

Each trainee is given guidance and instructions on the following:

1. Detailed program procedure on all phases of ASCS.
2. ASCS management practices and philosophy.
3. Administrative and personnel activities and procedures.
4. Use of all business machines used by ASCS offices.
5. Preparation and use of informational media.

The county committee has the final authority for selection of county executive directors. All qualified trainees are referred to county committees for consideration for appointment where a vacancy exists. Trainees agree prior to employment in the trainee program to accept employment in any county offering a position.

Eight trainees were enrolled in this program during 1972. One has been placed in a county executive director position. One has been placed in a state compliance specialist position. The other six are still in training.

SECTION II - BEEKEEPER INDEMNITY PROGRAM

The Agricultural Act of 1970 provides for the indemnification of beekeepers for the loss of honeybees as a result of the application of pesticides which have been registered and approved for use by the Federal Government at the time of application.

The indemnity payment program is retroactive to January 1, 1967, and will continue through December 31, 1973. To be eligible for payments, beekeepers must file an application with their respective county committee and must prove loss of or damage to their bee colonies because of the use of pesticides. The applicant must also submit evidence satisfactory to the county committee that he did not contribute to the claimed losses, that he took reasonable care to protect his bees and after exposure took reasonable action to reduce losses if he had prior notice of pesticide use in the vicinity of his colonies.

The program provides for indemnification based on the severity of the proven losses at the following rates: \$20 for each colony destroyed, \$15 for each colony severely damaged, and \$5 for each colony moderately damaged. Payments may also be made on the basis of loss of income in those cases where the claimant has adequate records that show precisely his income losses as a result of the use of pesticides.

BEEKEEPER INDEMNITY PROGRAM DATA*

County	Number Claims	Total Payment
Accomack	1	\$ 60.00
Augusta	5	1,675.00
Botetourt	1	700.00

State Totals	29	\$ 10,040.00

*For period July 1, 1971 through June 30, 1972

SECTION III - SUMMARY OF ACCOMPLISHMENTS UNDER THE 1972 RURAL ENVIRONMENTAL ASSISTANCE PROGRAM

The year 1972 represents the thirty-seventh year that the Federal Government has cooperated with the farmers and ranchers of this nation in a cost-sharing arrangement to conserve our soil, water, forest land and wildlife resources.

In 1972 the program was restructured and redirected toward solving pollution problems in addition to carrying out conservation measures that help to provide purer water, cleaner air and a better quality of life for all people.

Under the Rural Environmental Assistance Program (REAP), the government assists agricultural producers to combat their more pressing conservation and pollution problems by sharing the cost of needed work on the land. This is usually on a 50-50 basis with the farmer paying 50 percent of the cost and the Federal Government bearing the other 50 percent. A good, well-planned conservation management program of our cropland, pastureland and timberland is essential if we are to be successful in our fight against pollution of our land, air and water upon which all mankind depends for daily life. The general public as well as the farmer benefits from this cooperative effort by the government and the farmer to conserve our natural resources and improve our environment.

The State Rural Environmental Assistance Program was developed by the State Development Group consisting of the State committee (including the Director, Agriculture and Natural Resources, VPI and SU Extension Division); the State Conservationist, Soil Conservation Service; the Forest Service official having jurisdiction of farm forestry in the State; and a representative of the Governor of Virginia. The president of the Land-Grant College designated representatives to counsel the group in the formulation of the State program. Representatives of the State Soil and Water Conservation Committee, State Supervisor of Vocational Agriculture, the Commissioner of Agriculture and Commerce, the Virginia Division of Forestry, State Cooperative Extension Service, the Virginia Commission of Game and Inland Fisheries, Agricultural Experiment Stations, Farmers Home Administration, and Agricultural Research Service participated in the deliberations on the State program.

The tables which follow outline the 1972 conservation and pollution abatement accomplishments in Virginia through the Rural Environmental Assistance Program.

A. RECORD OF COST-SHARE PARTICIPATION AND EARNINGS

Year	Number Participating Farms	Payment to Farmers	Amount ASCS - SCS Agreement	Amount ASCS - VDF Agreement	Other	Total Gross Payments
1968	39,287	\$4,146,742	\$136,419	\$23,807	0	\$4,306,968
1969	38,132	3,998,990	135,726	24,116	0	4,158,832
1970*	36,114	5,342,278	216,258	17,685	0	5,576,221
1971	24,951	2,949,958	108,749	16,817	0	3,075,524
1972	26,979	3,660,542	141,515	23,253	0	3,825,310

*Includes Emergency Conservation Measures

64,746 Virginia farms participated in the REAP and ACP at least once during the five-year period 1968 through 1972.

SECTION IV - THE APPALACHIAN LAND STABILIZATION AND CONSERVATION PROGRAM

Section 203 of the Appalachian Regional Development Act provides funds for the conservation and stabilization of soil, water, forest, wildlife, and recreation resources in the Appalachian area. The plan for the implementation of this program in Virginia was developed in the Governor's office in cooperation with the United States Department of Agriculture and the Appalachian Regional Commission. Local county ASC committees administered the program at the county level.

Devised to contribute to the over-all economic improvement and social growth of the area, the program authorized funds on a cost-share basis to farmers for practices that would conserve and develop on-farm natural resources. Funds were approved on a three to ten year contract basis allowing one or more years for the completion of the practices. To guide county committees in making approvals, comprehensive farm conservation plans were made with the technical assistance of the Soil Conservation Service and the Virginia Division of Forestry. In allocating funds to individual farmers, county committees considered both financial need and economic potential, as well as conservation requirements for the unit.

In 1972, ASCS continued to service contracts that had been made previously with farmers in Buchanan, Dickenson, Lee, Russell, Scott, Tazewell and Wise counties. In addition, there was a continuation of the work in certain watershed areas that was started in 1968. These watersheds are: (1) Clear Fork-Wolf Creek, Bland, Giles and Tazewell Counties; (2) Peak Creek, Pulaski County; (3) Upper Clinch Valley and Headwaters of Clinch River, Tazewell County; and (4) Cedar Creek, Russell County

SECTION V - THE CROPLAND ADJUSTMENT PROGRAM

The Cropland Adjustment Program is a voluntary program designed to help farmers divert cropland from crops that are in surplus supply to a conservation use under long-term agreements. Land may be taken out of crop production for periods of five to ten years.

Participants receive annual adjustment payments based on the value of crops which otherwise would be produced on the land. Those farmers who agree to permit free public access for hunting and hiking may get an additional per-acre payment.

Funds have not been approved to accept new contracts since 1967. However, funds have been provided to service the contracts approved in 1966 and 1967.

The table which follows outlines the accomplishments for Virginia through the 1972 Cropland Adjustment Program.

SECTION VI - PRODUCTION ADJUSTMENT PROGRAMS

Acreage allotments, marketing quotas, acreage set-aside and price support payments are the several methods used by ASCS for production adjustment.

Acreage allotments and marketing quotas are authorized for cotton, peanuts, rice, tobacco, and wheat by the Agricultural Adjustment Act of 1938, as amended. Commodity acreage diversion programs and price support payments were authorized for cotton, feed grains, and wheat for the years 1966 through 1969 by the Food and Agriculture Act of 1965. In October of 1968 this Act was extended to cover the year of 1970. The Agricultural Act of 1970, applicable through 1973, initiated a cropland set-aside approach for participating producers in the voluntary wheat, upland cotton, and feed grain programs (1971-1973 crop years).

These programs were authorized by Congress in an effort to keep production of specific commodities in line with overall demand, and at the same time, provide reasonable income assurance to growers. In general, the programs are designed to adjust production by the amount of acreage produced. Participation in the cotton, feed grain, and wheat programs is voluntary by individual growers. For peanuts and tobacco, compliance with allotments and/or quotas is required by all growers to avoid marketing quota penalties after approval of these programs by a two-thirds majority of growers voting in a referendum for the particular commodity.

Under the Act of 1970, marketing quotas and penalties are suspended for the 1971-1973 crop years for wheat and cotton. The Act also established a \$55,000 limit on the amount of payments that a person could receive annually under each program.

The mechanics of operation of the several commodity programs are described in detail in the introductory statement to the statistical tables for each commodity in the following pages. However, there are several features of these adjustment programs which have general applicability.

Acreage allotments, through apportioning to the individual farms a national acreage considered desirable for planting to a field crop, provide a means of adjusting particular crop supplies closer to national needs. If acreage allotments alone are in effect, farmers who produce the commodity on acreage in excess of their farm acreage allotment are not subject to penalties on the "excess" production of the commodity, but they usually are not eligible for price support.

Marketing quotas are a means of regulating the production and marketing of commodities when supplies become excessive. A national marketing quota is the quantity of a particular commodity that in general will provide adequate and normal supply. This quantity is translated into terms of acreage. The national acreage allotment is apportioned among states, counties and individual farms.

After proclamation of a national marketing quota by the Secretary, quotas are in effect only when approved by a two-thirds majority voting in a referendum.

When quotas are in effect, all producers who are not covered by specified exemptions are subject to monetary penalties on marketings on their excess acreage if the acreage exceeds the farm allotment. Price support privileges are not usually extended to farms with plantings that exceed the allotted acreage. Under a tobacco acreage poundage program, in effect on flue-cured tobacco since 1965, poundage quotas as well as acreage allotments apply when the program is approved in a referendum by the producers. A poundage program is in effect for burley tobacco when approved in a referendum by producers. The Secretary may terminate or increase allotments or quotas as provided by law to meet a national emergency or a material increase in export demand.

Marketing quotas in Virginia applied to the 1972 crops of peanuts, and to burley, Virginia fire-cured, flue-cured, and Virginia sun-cured tobacco.

REFERENDUM RESULTS

The table below shows through 1972 how farmers voted on a national basis in the most recent referendums for commodities on which marketing quotas were voted on or in effect in Virginia during the 1972 crop year. The percentage of approval in Virginia, in most cases, was comparable to the national vote.

Commodity	Date of Referendum	Crop Years Covered	Total Votes Cast	Percentage of Approval
Tobacco:				
Burley	5-4-71	1971-72-73	14,010	94.9
Fire-cured(mail)	2-16 to 2-20-70	1970-71-72	3,965	93.5
Flue-cured	7-16-70	1971-72-73	13,959	97.3
Maryland	2-22 to 2-26-71	1971-72-73	3,976	19.2
Sun-cured(mail)	2-22 to 2-26-71	1971-72-73	665	94.6
Peanuts(mail)	12-6 to 12-10-71	1972-73-74	43,625	97.4

A. PEANUT ALLOTMENTS AND MARKETING QUOTAS

1 INTRODUCTION

For peanuts, a national marketing quota is proclaimed each year, regardless of the supply situation. Current legislation provides that the national quota cannot be less than the level which would provide a national acreage allotment of 1,610,000 acres. On December 6 to December 10, 1971, producers approved quotas for the 1972, 1973, and 1974 crops by a majority of 97.4 percent. Proclamation of a 1972 peanut quota of 1,634,150 tons was made on October 28, 1971, and a national allotment set at the minimum of 1,610,000 acres.

A producer who planted within his farm allotment could market all of his peanuts free of penalty and be eligible for the full level of price support. Any producer who had no interest in an allotment farm could plant and market up to, but not over, 1.0 acre of peanuts free of penalty from a non-allotment farm.

Legislation permits the sale or lease of peanut allotments within the same county under certain regulatory conditions. The closing date for making such transfers in Virginia is May 1.

B. TOBACCO ALLOTMENTS AND MARKETING QUOTAS

1 INTRODUCTION

A national quota for each of the five kinds of tobacco produced in Virginia is proclaimed by the Secretary of Agriculture when any of the following conditions exist:

- 1 When the total supply exceeds the reserve supply level (normal supply plus 5 percent), if a national quota has not been previously proclaimed; or
- 2 If a three-year quota previously proclaimed is coming to an end; or
- 3 If the Act has been amended which materially affects allotments or quotas before the end of the period for which quotas are in effect; or
- 4 If quotas previously proclaimed are not in effect because of disapproval by voting in a referendum except where three successive disapprovals have occurred.

Proclamation of tobacco quotas is for three years, with the amount of each year's quota announced annually. Proclamation date for the quota for flue-cured tobacco, which is on both an acreage and poundage basis, must be not later than December 1. For other kinds of tobacco, the date is not later than February 1. The referendum must be held within 30 days following the proclamation.

Quotas seek to limit the marketing of the commodity during the marketing year by placing penalties of so much per pound of marketings in excess of the quota. For kinds of tobacco other than flue-cured and burley, the actual production from the acreage planted within the farm allotment constitutes the farm marketing quota. Flue-cured tobacco is now operated under an acreage-poundage program which was first approved for the 1965 crop. The marketing quota in pounds is established each year based on the prior year's quota and adjusted to reflect overmarketings and undermarketings from the prior year's crop. The allotment is the acreage required to produce this quota as determined by the established farm yield.

A poundage program for burley tobacco was authorized by legislation approved April 14, 1971, and approved May 4, 1971 in a referendum by the growers for the three crops of 1971-73. For the first year (1971) of the poundage program farm marketing quotas were based on the average of each farm's four highest years during the preceding five years multiplied by 95 percent of the 1970 acreage allotment.

Provisions of the law permit the lease and transfer of flue-cured tobacco allotments within the county from one to five years in an amount not to exceed 50 percent of the cropland. The closing date for making lease agreements for flue-cured is November 30.

Starting in 1971, burley tobacco producers may lease or transfer burley tobacco poundage quota within the county from one to five years. The pounds that a receiving farm may receive is limited to the smaller of 15,000 pounds or the pounds determined by subtracting the basic marketing quota from the product of the farm yield and 50 percent of the cropland on the farm. These transfers may be effected by the lessee and lessor at either the county office or a designated place on the market at any time of year up through February 15.

Virginia fire-cured and Virginia sun-cured tobacco allotments may be sold or leased for a period of one to five years either within the county or to another county within the State in an amount not to exceed the larger of ten acres or 50 percent of the cropland on the receiving farm. Fire-cured and sun-cured (but not flue-cured) allotments may be transferred between farms by the owner. The closing date for making fire-cured and sun-cured leases or sales was May 1 for 1972.

All tobacco transfer lease or sale agreements are effective only when approved by the county committee.

C. SET-ASIDE PROGRAMS

1 INTRODUCTION

A new concept in farm programs was brought about by the Agricultural Act of 1970. This Act authorized a voluntary program for 1971-72-73 for cotton, feed grain, and wheat called the "set-aside program" designed to help farmers shift to a market-oriented agriculture. Program goals included those (1) to give farmers more opportunity for decision making on their farms, (2) to protect and improve farmers' income, (3) to keep agricultural production in line with anticipated needs, and (4) to put a greater reliance on the market place as the principal source of farm income.

Under the 1972 set-aside programs, several options were offered producers on the wheat and feed grain in comparison to that in 1971. However, in order to meet the basic requirements of each program, a participating farmer was required to set-aside to a conserving use an acreage equal to 25% of his feed grain base, 83% of his domestic wheat allotment, and 20% of his cotton allotment. This set-aside was maintained in a manner similar to the diverted acreage under the 1970 programs and the set-aside acreage under the 1971 programs. Once a producer set aside this acreage from his farm's total cropland and maintained a conserving base established for his farm, he was free to plant the remaining cropland to any crop he chose except for tobacco and peanuts in Virginia which were under marketing quotas.

The producer received payments established according to his feed grain base, wheat, and/or cotton allotments. The payments did not depend on whether or not the crop was planted or how much was planted with the exception of cotton. Cotton must have been planted in order for the producer to receive a payment. However, his acreage was not limited to the allotment established on the farm. There was no payment based on the acreage taken out of production under the 1971 programs.

Wheat producers who participated in the 1972 set-aside program received a payment of \$1.34 per bushel. One dollar and twenty-eight cents was received as a preliminary payment on July 1, 1972, and the remaining \$0.06 was paid on December 1, 1972. The bushels on which payment was made were determined by multiplying the farm allotment times the yield established for the farm.

Wheat growers had a further option whereby they could designate wheat acreage up to 75% of their farm domestic wheat allotment as additional voluntary set-aside. The payment rate was \$0.94 per bushel times farm's established yield times the acreage voluntarily set-aside. The added set-aside was in addition to the acreage equal to 83% of the domestic allotment set-aside in order to qualify for the 1972 program.

Under the feed grain program, producers had three options in 1972: (1) They could set aside a minimum 25% of their feed grain base acreage to qualify for loans and payments. (2) They could agree to set aside an additional amount of acreage up to 10% of their corn, grain sorghum base, or up to 20% of their barley base. (3) They could offer to set aside still another 10% of their corn-grain sorghum base acreage. By accepting the third option, a producer would also agree to hold his 1972 corn-sorghum acreage at not more than last year's acreage minus twice the additional set-aside acreage.

Under option 1, the producer would receive \$0.40 a bushel for corn, \$0.32 a bushel for barley, and \$0.38 a bushel for grain sorghum, computed on one-half the feed grain base. Under option 2, he would receive \$0.52 per bushel for corn, \$0.42 per bushel for barley, and \$0.49 per bushel for grain sorghum. Under option 3, he would receive \$0.80 a bushel for corn and \$0.76 a bushel for grain sorghum. Payments for option 2 or 3 would be computed on the additional acreage set-aside.

Cotton producers received a payment of \$0.15 per pound. Payment was determined by multiplying the acreage of upland cotton planted within the farm allotment by the payment yield established for the farm.

1/ Annual Statistical Report DM-55R 12/21/72

SECTION VII - 1972 COMMODITY CREDIT CORPORATION PROGRAMS

This report covers price support activity for the calendar year 1972. The grain marketing year covers part of two years making it impossible to have a complete report on grains. The wool report represents payments made in 1972 for the 1971 marketing year.

Grain prices were good throughout the year for most grains. This resulted in very small amounts of 1971 barley, grain sorghum, and wheat being delivered to CCC. All other commodities were redeemed. Present prices would indicate that no 1972 grains will be delivered to CCC.

1972 was the best year since the beginning of the program for the farm storage facility and dryer equipment loan program. Farmers increased storage capacity on their farms by obtaining 357 loans with storage capacity of 1,126,914 bushels. There is now over 9,600,000 bushel capacity of storage space on farms as the results of these programs. By having storage space on the farm, farmers can best protect themselves from low prices on an overloaded market at harvest time. Repayments of loans continue to be excellent as reflected in this report.

SECTION VIII - ACREAGE COMPLIANCE

The success of allotment, marketing quota, and price support programs is dependent on obtaining accurate reports of compliance. Essential to this is a well-planned efficient program to insure accurate and timely determinations of acreages.

Aerial photographs are used in all counties in the measurement of acreages since this has proved to be the most economical and accurate method of determining acreages. The photographs used are printed to an accurate scale of 660, or 1,000 feet per inch. The scale accuracy of the photographs is controlled at the time they are printed by the application of accurate ground control lines measured between identifiable landmarks on the photographs.

The producer certification method of acreage compliance was used for all programs. The burley tobacco program, being a poundage-quota system, does not require acreage certifications or field checks. Producer certification places the responsibility of acreage determination on the producer. The farmer's report is not an estimate or a report of intentions, but the actual acreage utilized based on the best information available to the farmer. In order for the producer to be in a position to report accurately, ASCS furnished him several tools - measurement service, photocopies, and counter service.

Measurement service includes the staking of areas before planting or measurement of crops after planting. The entire cost of this service is paid by the producer. All counties offered measurement service in 1972 and service was completed on 13,572 allotments and/or other land uses.

After an application for staking service is received, a reporter visits the farm; and with the assistance of the producer, the field or the areas are measured and staked before the crop is planted. By planting within the staked area, the farmer is assured of planting the entire allotment; and at the same time, eliminates the risk of overplanting. Measurement service for other purposes affords the producer the opportunity of knowing the acreage of each field or for all fields on the farm. It also affords him the opportunity to have his crop measured as soon as planted and to make any adjustment that is necessary.

Photocopies are made for a farm by outlining the farm and field boundaries on an aerial photograph, numbering each field and determining the acreage and posting it within the boundaries of the field. The area of the photograph covering the farm is then copied through a photo-direct process to prepare a master and several photocopies are printed by an offset duplicator. These photocopies show all the details of the photograph as well as field numbers and acreages. The acreages shown are used as official acreages for ASCS programs unless the boundaries are changed.

As producers sign up in the various programs, photocopies are given the producer at the counter. Acreages and plans for planting or setting aside land are discussed at the time as an aid to the producer in making his acreage determinations to support his compliance certification after planting of the crop. The photocopy is again reviewed with the producer at the time he reports his compliance to insure that his determinations are correct. If any doubt exists concerning the accuracy of his determinations, measurement service is offered and recommended.

In 1972, 229 reporters were employed who made over 35,000 determinations. These determinations involved measurement service, initial compliance determinations, acreage adjustments, acreages rechecks and administrative control visits on farms where compliance was determined by producer certification.

The table which follows shows the number of acreage determinations made in 1972.

NUMBER OF ACREAGE DETERMINATIONS IN 1972

Crop or Program	No. Farms	Number Measurement Service	Number Farmer Certifications Accepted	Number of Administrative Checks of Farmer Certifications
Wheat	18,626	26	18,146	3,800
Feed Grains	31,243	268	30,102	5,373
Cotton	472	186	468	193
Peanuts	5,616	4,263	5,593	1,192
Set-Aside	32,533	2,724	31,359	5,869
Tobacco				
Flue	12,026	5,376	11,884	2,045
Fire	5,346	506	4,976	573
